

SKODA

For better comfort
of the model Škoda Enyaq iV

What's new?

The new version of the software called **ME 3.2** includes updates to the infotainment system's functions, controls, and design. In the future, it will allow updates of your vehicle's software without the necessity to visit your service partner. The improved battery management improves your car's range and increases the charging efficiency, which means shorter charging times. This update also includes an expanded range of Škoda Connect online services.

3 Changes of the **Digital Cockpit**

4 Simplified deactivation of the **Lane Assist** function

6 **Improved navigation system** allows easier searches for charging stations

5 Reducing the **turn signal volume level**

1 Optimized charging management and **higher charging power**

8 Extended offer of **Škoda Connect online services** and **new package features**

Expanded functionality of the **Travel Assist** button

2 **Plug & Charge**

1 Optimized charging management and higher charging power

The charging and range graphics in the infotainment now include a **destination display** (see the Owner's Manual in the infotainment system: **High-voltage system › Setting the charging process › Overview**).

2 Plug & Charge

A new **authentication method makes the public charging easier**. To start charging, all you have to do is to connect the vehicle to the Plug & Charge compatible charging station. (see the Owner's Manual in the infotainment system: **High-voltage system › Setting the charging process › Overview**).

3 Changes of the Digital Cockpit

It provides a **more intuitive display of objects in the surrounding area**, and the battery level symbol now also includes the state of charge as a **percentage**. The head-up display now shows a **3D visualisation of the distance to the destination**. The Digital cockpit **now displays the following data**: average speed, average energy consumption, distance travelled and driving time. It also enables to switch between **3 modes of driving data** displaying on the right side of the Digital Cockpit: Since start, Long-term, Since recharging.

4 Simplified deactivation of the Lane Assist function

To deactivate this function just use the icon in the upper scrolling menu or the icon on the bottom bar of Favorite items (see the Owner's Manual in the infotainment system: **Driver assist systems › Lane Assist › Settings**).

5 Reducing the turn signal volume level

Based on customer feedback, the volume of the turn signal has been turned down.

6 Improved navigation system

It allows easier searches for charging stations, the **filtering of charging stations by preference**, and the option of **filtering IONITY and Powerpass stations** (see the Owner's Manual in the infotainment system: **Navigation › Map › Settings**).

7 Travel Assist

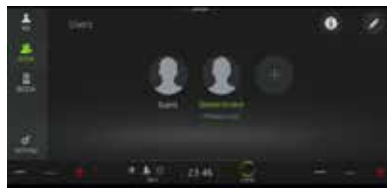

The travel assist button's expanded functionality for switching between **Adaptive Cruise Control** and **Travel Assist**. Selected function is activated by lever under steering wheel. The setting now remains active even after the car is restarted (see the Owner's Manual in the infotainment system: **Driver assist systems › Travel Assist › Settings**).

8 Extended offer of Škoda Connect online services and new package features

- Thanks to the update, Climate Control will alert you through MyŠkoda notification about possibility of **low battery temperature** on your next departure.

- User management and privacy settings make the user registration process simpler (see the Owner's Manual in the infotainment system: **Online**

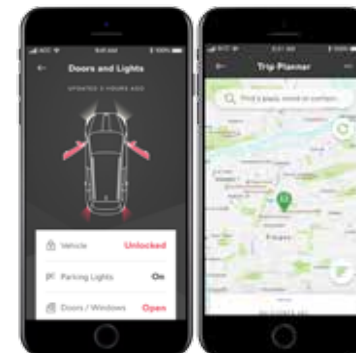

Services > User registration and activation of Škoda Connect services), two new options in the privacy settings and the service availability (connection) status display (see the Owner's Manual in the infotainment system: **Online Services > Setting personal data protection**).

- **Proactive Service** brings new features such as **Online Personalization, Over-the-Air Update, Service Scheduling, Vehicle Health Report, Info Call**, and even **Breakdown Call**.

- Changes within the **Infotainment Online** have resulted in new features such as **Online POI Search, Online Destination Import and Online Route Import**, as well as an improvement to **Charging Stations and better route planning**.

- With the **Remote Access** package, you can now keep track of the **Vehicle Status and Parking Position** or use the **Pay to Park and Digital Certificate** services.

For more information, see the **availability list**

Can't use the extended offer of the mentioned Škoda Connect services?

You probably haven't the new Proactive Services and Remote Access licences activated yet. Scan this QR code and follow the instruction in the step-by-step video. Please note that "being the primary user" is necessary to activate the new licence.

What to Expect Soon?

All other updates will now run over-the-air using the Online System Update service. Therefore, a visit to the service center will no longer be necessary for further updates.

- ⓘ Please note that to have the Over-the-Air Updates fully functional your vehicle needs to have Škoda Connect services activated. To make it happen your Enyaq iV has to have primary user of the vehicle assigned. Scan this QR code and find more in the “How to” video.

For internal use only.
